When we talk about inclusive attitudes, we are not just talking about a demographics-based story. We have found that people who have inclusive attitudes also have a very different understanding of curiosity, which we believe is one of the key ingredients to creating a more inclusive attitude.

We have developed a survey that measures the attitudes of visitors to museums. The survey measures the following:

- Curiosity
- Concern for others
- Prosocial behavior
- Inclusive attitudes
- Engagement in informal learning

Inclusive attitudes are measured on a scale from 1 to 5, where 1 is completely anti-inclusive and 5 is completely inclusive. The scale is based on the traits and values of inclusive people that we have identified in our research.

In our survey, we found that people with inclusive attitudes are more likely to:

- Be curious
- Care about others
- Engage in prosocial behavior
- Prefer museums that promote inclusive attitudes
- Support policies that promote inclusion

We have also found that people with inclusive attitudes are more likely to:

- Be open to new experiences
- Be open to new cultures
- Be open to new ideas
- Be open to new perspectives
- Be open to new viewpoints

These findings suggest that inclusive attitudes are not just about demographics, but also about personality traits and values.

In our survey, we asked people about their curiosity and their attitudes about museums. We found that people who are curious are more likely to have inclusive attitudes. This suggests that curiosity is a key predictor of inclusive attitudes.

In our survey, we asked people about their concern for others and their attitudes about museums. We found that people who are concerned about others are more likely to have inclusive attitudes. This suggests that concern for others is a key predictor of inclusive attitudes.

In our survey, we asked people about their prosocial behavior and their attitudes about museums. We found that people who are prosocial are more likely to have inclusive attitudes. This suggests that prosocial behavior is a key predictor of inclusive attitudes.

In our survey, we asked people about their inclusive attitudes and their attitudes about museums. We found that people who have inclusive attitudes are more likely to have inclusive attitudes. This suggests that inclusive attitudes are a key predictor of inclusive attitudes.

In our survey, we asked people about their engagement in informal learning and their attitudes about museums. We found that people who are engaged in informal learning are more likely to have inclusive attitudes. This suggests that engagement in informal learning is a key predictor of inclusive attitudes.

In our survey, we asked people about their inclusive attitudes and their attitudes about museums. We found that people who have inclusive attitudes are more likely to have inclusive attitudes. This suggests that inclusive attitudes are a key predictor of inclusive attitudes.

In our survey, we asked people about their inclusive attitudes and their attitudes about museums. We found that people who have inclusive attitudes are more likely to have inclusive attitudes. This suggests that inclusive attitudes are a key predictor of inclusive attitudes.
